### Course Scope

The Quality Control Inspector (QCI) course is from the WAPTAC Standardized curricula and is based on a National Renewable Energy Laboratory/U.S. Department of Energy Job Task Analysis (JTA) of the same name. The course spans five (5) days of instruction with a focus on the job description/duties outlined in the JTA. Students will be introduced to and practice the skills needed to become an effective QCI. These skills include: performing an audit of the building, verifying alignment of the work performed against the work plan, observing the retrofit work in progress, understanding specifications and standards, performing various diagnostic tests including building airtightness and combustion safety, reporting findings and concerns, identifying corrective actions, effectively communicating with the client, and determining the final pass/fail of the work performed.

I hereby agree to comply with the requirements and directions of the training program, and to supply any information relevant to safety and medical issues.
